Subject: Hi, all - I just forwarded the invitation, which includes the agenda, for the monthly LDWG check-in

Hi, all - I just forwarded the invitation, which includes the agenda, for the monthly LDWG check-in Wednesday (today) afternoon.

I haven't sent any additional topics in. If you have some thoughts, let me know.

It looks like they've given some thought to helping focus the tiering discussions.

Jing, now that the NOAA splits have been analyzed and validated, it might be interesting to find out if LDWG has looked at the comparability of results for individual samples compared to the composited samples. Rick was noting that a single high sample near the former Rhone Poulenc facility may have influenced the composite in that area, for example.

I'm also aware that the Tier 2 data must have started to trickle in, since the labs had 30-day turnaround and field work began June 1. Perhaps they have some sense of what they're seeing so far. Also, they did a survey of structures – what information can they report from that?

I suppose we could bring up:

1. Denver Ave spill and results from sampling near Duwamish/Diagonal outfall
2. Need for a fall (?) meeting with LDWG, EPA, and Ecology – on Upper Reach source control / TCP cleanups? [if there are data gaps, we should identify them and fill – perhaps via RD?]
3. EMJ sampling, T117, Slip 4, and Boeing Plant 2 – do the data regarding current “ambient” concentrations in sediment raise any flags, point to specific sources, expose data gaps, etc?
4. cPAH ESD - ***no news to report – I'm working on it!***
5. Benzyl Alcohol - ***no news to report. I guess we'll see what the data show***
6. status of Boeing shoreline work, Port's programmatic JARPA – any other shoreline development plans?
7. Potential presentations (of Tier 1 results? Of plans for Tier 2? Of source control info?) for November stakeholder meeting.

What topics have I missed?
